# Draft

15 January 2002

The purpose of this draft is to indicate for your information some of the functions of a bet and bet slip chart with landmarks.

1. The function of the proposed bet slip chart is to have landmarks (lines) that are used as guides to monitor drawn digits of a lottery game and to divide the game digits into areas (positions) determined to be active and inactive over a specific number of previous games.
2. By marking a bet slip with landmarks, matching those used on a chart, a player can see where the activity and inactivity has been on a daily basis as related<sup>to</sup> the game numbers on the bet slip up to<sup>a</sup> the time for placing a bet.
3. The function of a bet slip chart is to have flexible lines (landmarks) used on charts and matching bet slips to give assistance to players who are handicapped, suffering from time to time with diminishing vision. The breaks in the lines help those with impaired vision to locate numbers in charting and making marks on a bet slip.

The structure of bet slips by Lovell and Bruin are unique and for their complete systems only. They are in no way similar to existing bet slip types used in the US, US territories, The commonwealth of Puerto Rico, states of foreign countries, and foreign countries, therefore, there is no possibility of interface with those bet slips or the one that I am proposing.
